Integrate iMIS With Any Application

iBridge FOR iMIS

Need iMIS integrated with third-party applications? Integrating iMIS with websites and other software has traditionally been a challenge, requiring technical staff who are proficient in iMIS and have considerable experience with the web or the other applications.

You now have a way to exchange data in real-time – reading to and writing from the iMIS database – so there's no need to worry about synchronizing data. Both applications are kept up-to-date automatically.

iBridge uses the iMIS APIs to exchange data between the applications. This keeps your integration intact when either iMIS or the other product is upgraded – there's no need to completely re-build the integration. The integration is completed once, and you are all set.

Having a standardized way to integrate iMIS with websites, third-party applications and custom software eliminates restrictions on what you can do with your applications, and delivers the maximum flexibility and power.

With iBridge for iMIS, you can get the integrations you need without programming

With iBridge you can:

• Get iMIS to work seamlessly with Salesforce, learning management systems, event software, web applications and much more.

• Work with any web design team and get the website of your dreams – you're no longer limited to web developers who are iMIS experts.

• Create a better member experience through tighter integration of your applications.

• Protect your investment in iMIS. Since iBridge uses the iMIS APIs, your upgrade path is protected and the integrity of your data ensured.

iBridge uses the iMIS APIs to exchange data. This keeps your integration intact when either product is upgraded.

salesforce • bluemoon software® • Braintree • resultsdirect • peach new media • ektron • GoToWebinar by CITRIX • a2zInc • eSHOW event manager tools • Drupal • iMIS • Cornerstone OnDemand • SYSCOM INC • sitecore • ScholarLab • sitefinity • digital ignite • CommonSpot™

ISG has already defined the integrations with the software applications associations use most. If there's an integration you want that doesn't already exist, just let us know! We'll build it.
